## SUMMER SQUASH

BURPEE GOLDEN ZUCCHINI

## 13A. Exhibit A: - Origin and Breeding History of the Variety

A cross between Fordhook Zucchini (a catalogued variety) X a gourd (uncatalogued)--Result of 6 backcrosses to Fordhook Zucchini plus selection of individual plant in F/6 generation.

The original cross of Fordhook Zucchini by a gourd was made by Oved Shifriss and the F/1 hybrid was grown by us selfed and certain progeny backcrossed to Fordhook Zucchini by Durpee personnel. All subsequent selection and backcrossing was made by Durpee personnel.

Many individual plants were selfed in 1967. The progeny from a single plant in 1968 came true for the precocious golden color, was without bitterness and had desirable Fordhook Zucchini shape.

Each plant in this progeny was selfed and lined out in 1969. Several lines were eliminated for shorter than desirable length but all were true breeding for fruit color, shape and plant habit.

An increase block consisting of approximately 30 lines was grown in 1970 and found to be true breeding.

## SUMMER SQUASH

BURPEE GOLDEN ZUCCHINI

## 13B. Novelty Statement

At the time of application in 1971 to our knowledge there was no variety in the trade similar in combined color and fruit shape to Burpee Golden Zucchini. The closest variety to plant and fruit type we believed to be Fordhook Zucchini.

We are not familiar with Dr. Oved Shifriss' PY Fordhook Zucchini and if it is felt this is a comparable variety we will need a sample to compare in replicated trials to prove the difference between it and Burpee Golden Zucchini.

If PY Fordhook Zucchini was developed by the same method from the original cross by Dr. Shifriss then the two varieties must be closely related.

## 18. COMMENTS

7200054

#11 Flesh thickness at edible maturity was measured not including any placental material which actually is considered edible flesh in the summer squashes which are usually eaten in the immature stage.

#12 Seed cavity has little relevance when measured at immature edible stage in the Zucchini types.

#17 Fruit color is listed as Bright Golden. This is a unique color in summer squash and there is no variety on the market with the Zucchini size and shape with this Bright Golden color.

13D. Exhibit D: Additional Description of the Variety

Annual. Plants bush in habit single stemmed only occasionally branched. Plant habit open. Leaves with long petioles, deeply cut with 5 lobes. The two basal lobes usually medium deeply cut in two. Distinct silver green irregular mottle on leaves.

Fruits distinctive by having a precocious yellow color long before anthesis. This is a light lemon yellow turning to chrome yellow at edible stage. Fruits medium length generally quite straight, smooth with practically no ribbing except for short distance from stem end, cylindrical with nicely rounded blossom ends. Excellent zucchini type flavor.
